The Big Five Model

Major Personality Traits Influencing OB

- Self-evaluation (self-perspective)
- Locus of control
- Machiavellianism
- Self-esteem
- Self-monitoring
- Risk taking
- Type A personality

Self-evaluation (self-perspective)

“the degree to which people like or dislike themselves”

- People who have a positive core self-evaluation see themselves as effective, capable, and in control
 - Believe in their inner worth and basic competence
- People who have a negative core self-evaluation tend to
 - dislike themselves
 - question their capability
 - view themselves powerless
 - No control on environment.

Locus of Control

“refers to people’s beliefs about the amount of control they have over their lives”.

Internals

Individuals who believe that they can control what happens to them.

Externals

Individuals who believe that what happens to them is controlled by outside forces such as luck or chance.

Machiavellianism (Mach)

“Degree to which an individual is pragmatic, maintains emotional distance, and believes that ends can justify means”.

- **High Machs manipulate more, win more, are persuaded less, and persuade others more than do low Machs (Christie & Geis, 1970).**
- **High Machs make good employees in jobs that require bargaining skills (labor negotiation) or that offer substantial rewards for winning.**

Self-Monitoring (SM)

“A personality trait that measures an individuals ability to adjust his or her behavior to external, situational factors”.

- ❖ High SM are capable of changing their behavior and expressions according to the situations.
- ❖ High SM progress faster in their career than low SM.
- ❖ Highly sensitive to situational cues, and are able to behave differently in different situations.
- ❖ High SM are sometimes called “Chameleon” (Kilduff & Day, 1994).
- ❖ High SM are more likely to be promoted both within the organizations and external position (Kilduff & Day, 1994) and receive successful career monitoring

Risk-Taking

- High Risk-taking Managers

- Make quicker decisions
- Use less information to make decisions
- Operate in smaller and more entrepreneurial organizations

- Low Risk-taking Managers

- Are slower to make decisions
- Require more information before making decisions
- Exist in larger organizations with stable environments

- Risk Propensity

- Aligning managers' risk-taking propensity to job requirements should be beneficial to organizations.

Type A-Type B Personality

Type A's

1. are always moving, walking, and eating rapidly;
 2. feel impatient with the rate at which most events take place;
 3. strive to think or do two or more things at once;
 4. Always in haste;
 5. are obsessed with numbers, measuring their success in terms of how many or how much of everything they acquire.
-

Type B's

1. never suffer from a sense of time urgency with its accompanying impatience;
2. feel no need to display or discuss either their achievements or accomplishments;
3. play for fun and relaxation, rather than to exhibit their superiority at any cost;
4. can relax without guilt.

INTROVERSION

 Those who prefer *Introversion* draw their primary energy from the inner world of information, thoughts, ideas, and other reflections.

EXTRAVERSION

 Those who prefer *Extraversion* are drawn to the outside world as their elemental source of energy.

Where do you get your energy?

I **INTROVERSION**

- Have quiet energy
